Experience

Drinkprime – Bengaluru

March 2023 – Present

Senior Software Developer

- Adopted an event-driven architecture using **RabbitMQ** to offload heavy operations asynchronously, **reducing database overhead**, increasing system scalability, and **improving overall API response times**.
- Built a dynamic banner system with **Redis caching**, allowing non-tech teams to update app banners instantly and cutting backend load by **40%**, ensuring fast, reliable delivery under high traffic.
- Integrated a **secondary payment gateway** to diversify processing channels and reduce failure rates, enabling **greater flexibility** and reliability in customer transactions.
- Engineered a scalable lead creation system with loosely coupled services to respect CRM rate limits, enabling **reliable lead syncing** and achieving **near-zero data loss**.
- Built a **sponsor tracking platform** enabling investors to monitor **real-time device earnings**, and automated **device reassignment** upon lease expiry to improve **asset utilization**.
- Led design of a customer segmentation engine incorporating **KYC data**, enabling **hyper-personalized offerings** and improved targeting.
- Developed a **rule-based automated refund system** that processes refunds **without human intervention**, enabling **one-click refunds**, reducing refund-related issues by **90%**, and improving the **customer experience**.
- Refined firmware deployment by enhancing **MQTT APIs** and layering **Redis caching**, **cutting microservice load by 50%** and speeding rollouts by **30%**.
- Played a key role in the successful migration of entire infrastructure from **AWS to GCP**, achieving a smooth transition with zero service disruptions.

Josh Software PVT LTD – Pune

Jan 2022 – March 2023

Software Developer

- Developed a comprehensive **React-based code library** for **dynamic form generation from JSON**, incorporating **customizable validations and extensible functionalities**.
- Engineered a **real-time marketing automation platform** leveraging a **Customer Data Platform**, utilizing full-stack expertise in **React and Spring Boot**.
- Designed and implemented **backend and frontend components** for **segment editing flows**, significantly enhancing **data management efficiency**.
- Utilized **ReactFlow** to build intuitive **journey-building tools**, enhancing **UX and interaction design**.
- Developed a dynamic **form schema with multilingual support**, boosting **accessibility and engagement** globally.
- Conducted **load testing on a Mosquitto MQTT broker** using **Go**, analyzing performance under concurrent clients transmitting messages every two minutes and monitoring **message drop rates**.
- Integrated a **time-series database** to automate **client report generation** at intervals of **5 minutes, 1 hour, 1 day, 30 days, and 1 year**, optimizing **data tracking and reporting workflows**.

Education

Lakshmi Narain College of Technology Bhopal, MP

2018 – 2022

- Bachelor of Technology, Computer Science (CGPA: 9.33 / 10)

Technologies

Backend: Java, Spring Boot, Go, Hibernate, RabbitMQ

Frontend: JavaScript, React, Redux

Databases: SQL, MySQL, MongoDB

DevOps Cloud: AWS, CI/CD, Jenkins, Docker

Tools: Git, Jira, VSCode

Achievements / Awards

- 600+ Problems of various difficulties solved on [Leetcode](#) [HackerRank](#), [GeeksForGeeks](#)
- Rashtrapati Award in Scout
- Hackwithinfy(Infosys) Finalist
